

# CDM-ISO-STRIP

## Resilient strips for decoupling

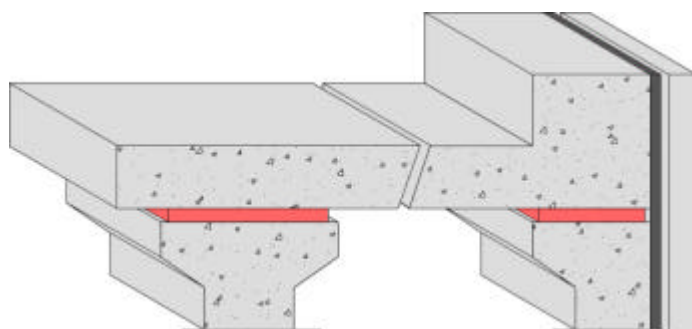

**CDM-ISO-STRIP** is used for the vibration isolation decoupling of walls, structural floor elements and stairs from the supporting structure. To provide good decoupling all structural elements must be isolated from each other by the CDM strips and all stiff contacts avoided.

### Required Data for design:

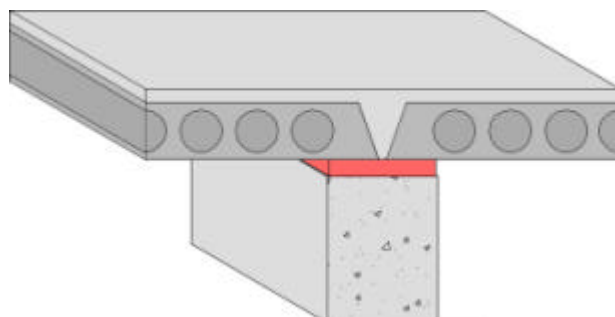

- required performance, eg insertion loss or natural frequency
- Imposed dead and live working loads
- contact surface (type and dimensions)

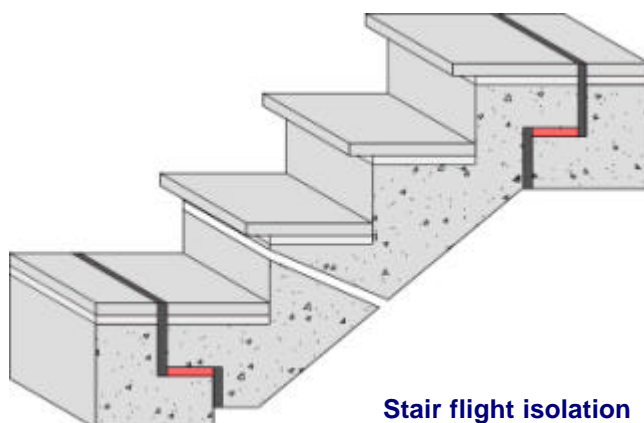

### Installation examples

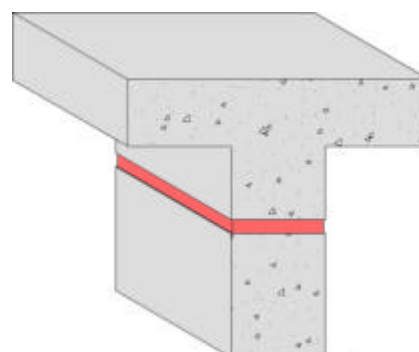

Decoupling of the structural elements

Decoupling of floor segments

Stair flight isolation

Decoupling of walls and beams
