

CDM-ISO-TRANSFO

Transformer Vibration Isolation

The **CDM-ISO-TRANSFO** system consists of vibration isolation strips which easily and efficiently minimise the vibration transmission for all types of transformers, from small distributor units to large power transformers.

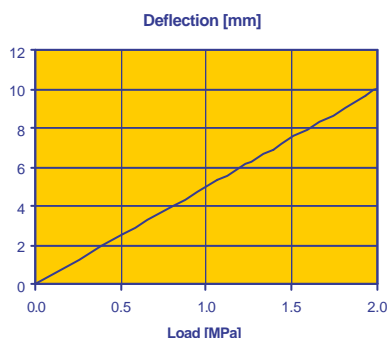

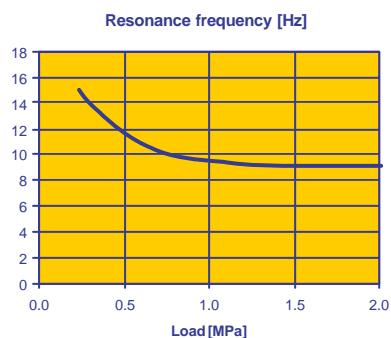

The **CDM-ISO-TRANSFO** strips are 38 mm thick with the length and width being project specific.

Properties of the CDM-ISO-TRANSFO material

- Temperature range: -20°C to +100°C
- Excellent electrical resistivity
- Good resistance to most oils and solvents (details available on request)

Required data for design:

- type and size of the transformer
- total weight of the transformer
- location of centre of gravity of the transformer
- support surface layout

(Mean values for a sample of 75*75 mm)
