

CDM-ISO-FLOORSTRIP-MARINE

Sound Insulation for Floors Resilient Floating Floor Strips

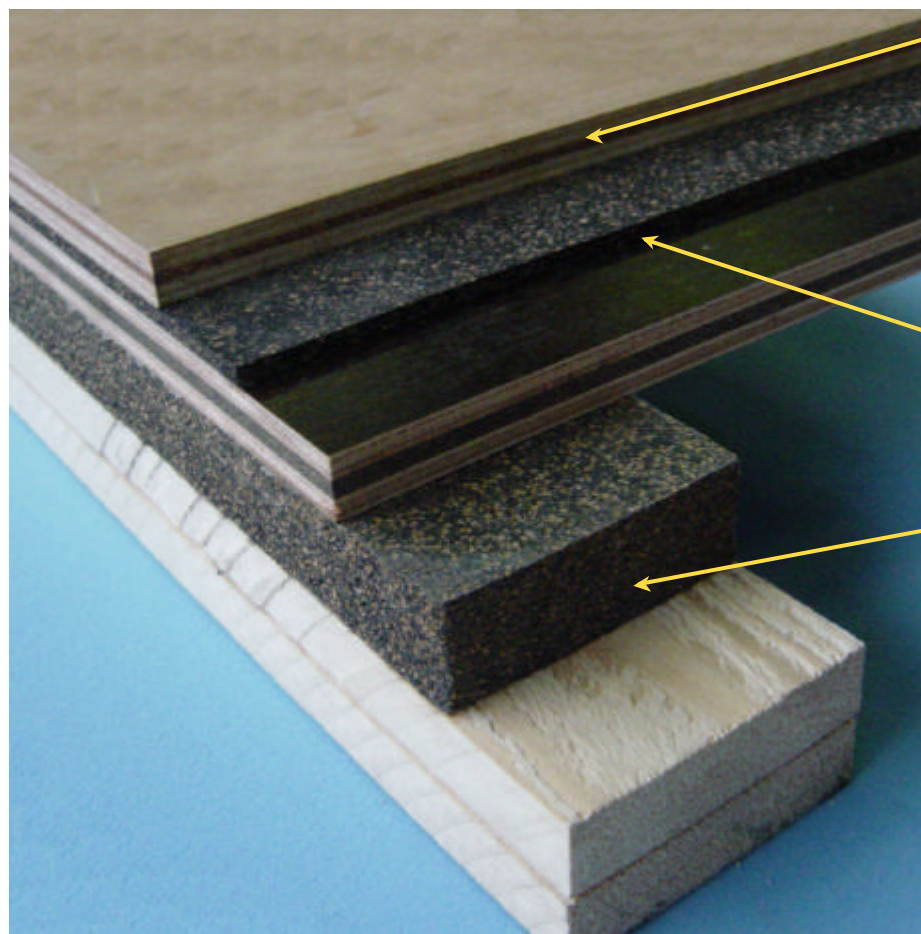

The **CDM-ISO-FLOORSTRIP Resilient Floating Floor Strips** are designed to provide the maximum possible sound insulation and vibration isolation for floors in luxury boats and yachts.

The **CDM-ISO-FLOORSTRIP** is used in combination with **CDM-ISO-CORE** boards to provide the best possible performance with the minimum of weight.

For CDM to select the correct **CDM-ISO-FLOORSTRIP** type, thickness and width the following information will be required:

- imposed dead and live loads
- support contact area
- spacing of supports
- performance requirements

The correct **CDM-ISO-FLOORSTRIP** product will then be selected by CDM from the wide range of CDM elastomer materials available (CR, RC, RR, MF, PF) – please refer to Material Data Sheets.

CDM-ISO-CORE board fixed into bottom **CDM-ISO-CORE** board (care must be taken to ensure that fixings do not connect the board to any structures beneath the floating floor)

Additional **CDM-ISO-CORE** damping sheets can be installed between boards

CDM-ISO-FLOORSTRIP Resilient Floating Floors strips have a self-adhesive backing which allows easy installation onto the support structure
