## Moulded Re-Cycled Resin-Bonded Rubber

CDM has the capacity to mould 3-D shapes out of fully Re-Cycled Resin-Bonded Rubber, **CDM-RCRBR**. There are a huge range of products already in existence including traffic posts, speed bumps, platform edge protection, embedded rail jackets, flooring etc. CDM can manufacture almost any new 3-D moulded rubber product.

The Ecological argument for **CDM-RCRBR**

1. Waste rubber is not dumped
2. Replaces cement, plastics, aluminium, tropical timber
3. Again recyclable after use

The advantages of **CDM-RCRBR**

1. Long life-span
  - weather resistant
  - corrosion resistant
  - resistant to acids and alkalis
  - wear resistant
2. Safe
  - no splinters
  - less injuries (e.g. cyclists)
  - shock-absorbent (less vibrations)
  - speed reducing
  - good visibility (can be coloured or painted)
3. Minimal impact
  - usable as noise barrier
  - silent speed bump
  - reduced vibration impact on buildings
  - minimal impact on streets
  - (can be installed without digging)
